

**The Future of Identity Management – A Hybrid Architecture**

**Jay Schulman**  
Director, KPMG

Professional Strategies – S31

**Session Abstract**

The Future of Identity Management – A Hybrid Architecture

Identity management will never disappear from the enterprise. This presentation will outline what the future of identity management might look like -- how on-premise, cloud, and 3<sup>rd</sup> party access could be weaved together via a common identity fabric to allow effective management of access for employees, business partners, and customers. As companies are interacting with a community of non-employees that is increasing in size and complexity, we will discuss how the use of federation and other techniques can reduce the burden of management while maintaining control and improving usability.

**Target Audience**

IT Manager, CISO, CIO, IT Auditor, Chief of Compliance, Chief Risk Officer.

**COBIT Objectives**

Ensure compliance with external requirements  
Manage human resources  
Define the IT organisation and relationships

**Speaker Bio**

Jay is a Managing Director at KPMG LLP and National Leader of KPMG's Identity and Access Management practice. Jay has over thirteen years' experience in the information systems field and has a varied background in identity management, information security, and regulatory compliance. He previously served as Business Information Security Officer at JPMorganChase. Jay has served numerous companies focused on identity and access management, access governance, and identity in the cloud.
