Cloud Computing

Understanding The Cloud Operating Environment

Cloud Environment = Internet-based data access & exchange + Internet-based access to low cost computing & applications

Cloud Environment Characteristics:

Cloud Service Models

Software as a Service <i>Business operations over a network</i> "SaaS"	Platform as a Service <i>Deploy customer-created applications to a cloud</i> "PaaS"	Infrastructure as a Service <i>Rent processing, storage, network, other computing resources</i> "IaaS"
---	--	---

Cloud Deployment Models

Private	Operated for a single organization
Public	Available to the general public or large industry group, owned by an organization selling cloud services
Community	Shared by several organizations, supporting a specific community

Cloud Impact on Technology

“Self” Provisioned & Maintained

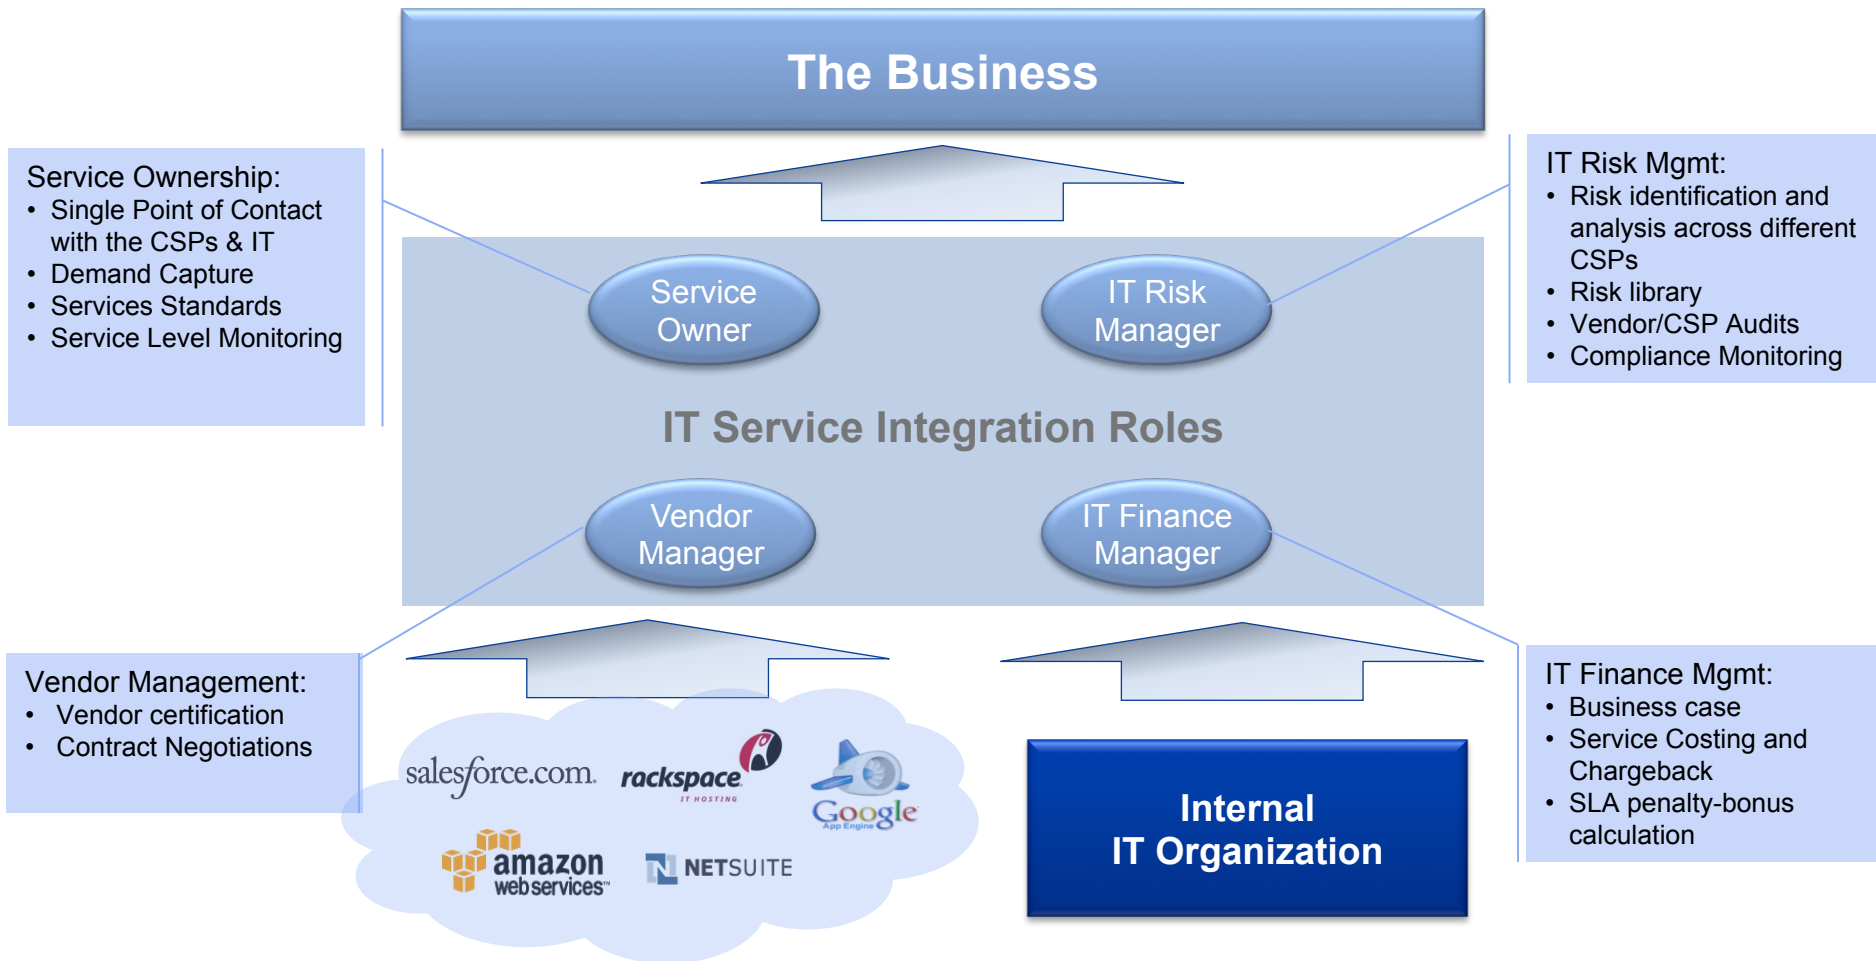

Virtualized “Utility” Consumption

“The rise of the cloud is more than just another platform shift that gets geeks excited. It will undoubtedly transform the information technology (IT) industry, but it will also profoundly change the way people work and companies operate.”

- The Economist

Impact of cloud computing on IT Operating Model

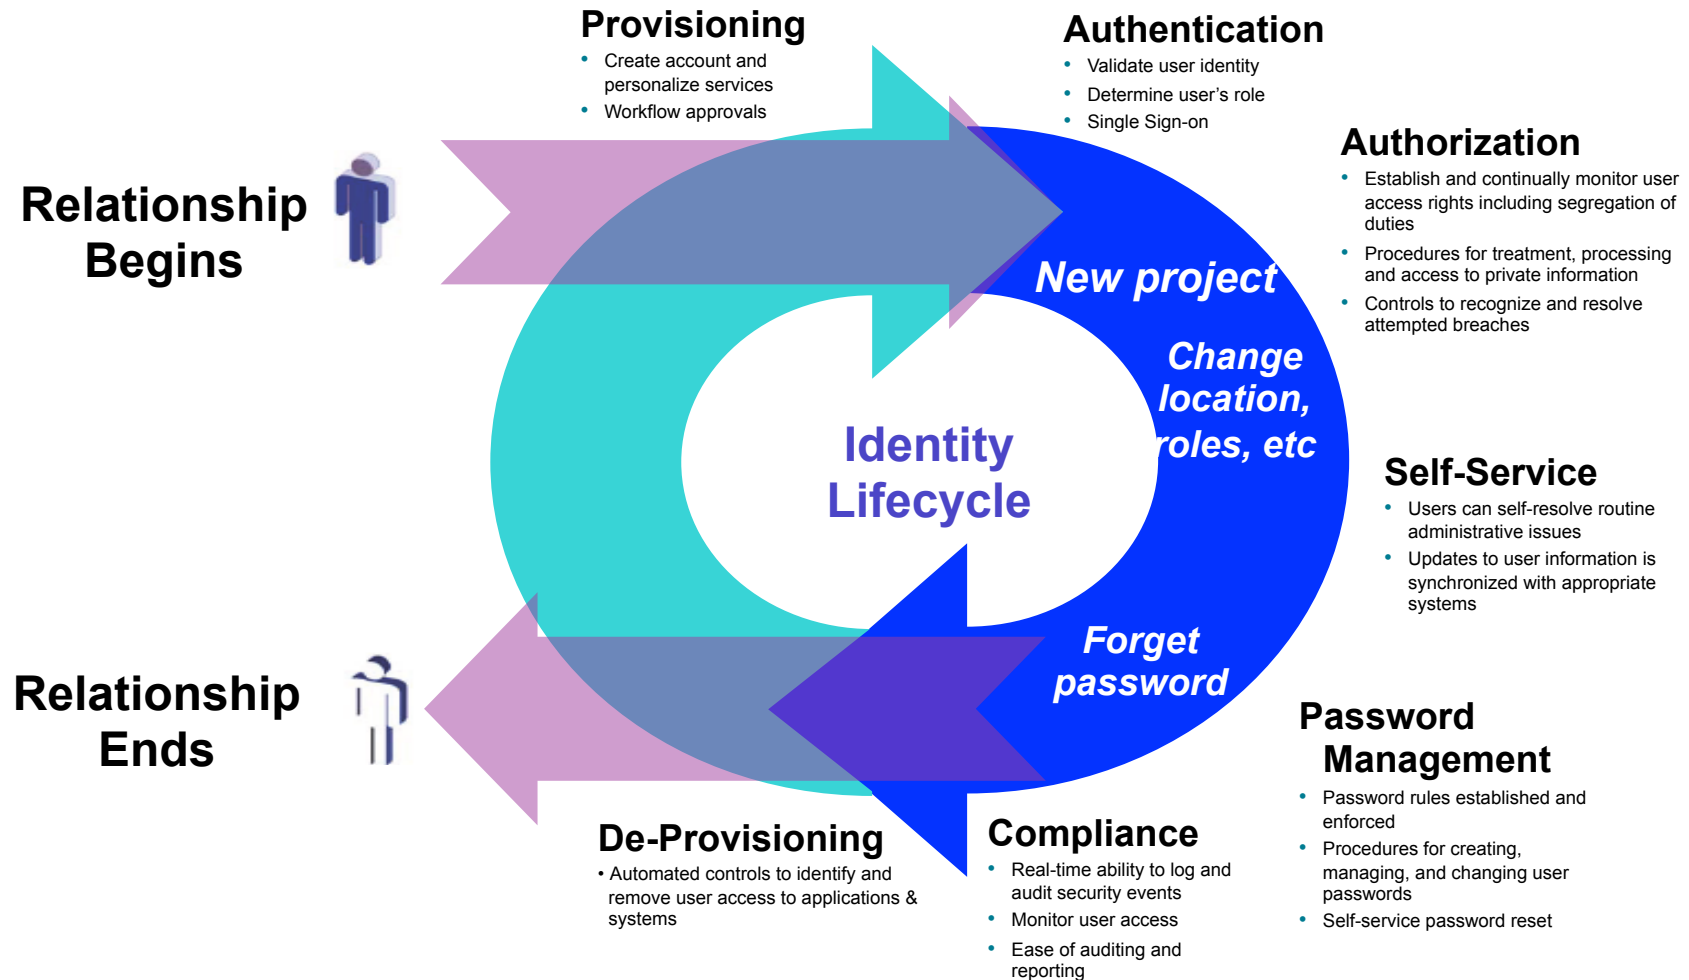

Identity Management

Identity and Access Management – Strategy and Architecture (cont.)

User Identity Lifecycle Methodology

Identity in the Cloud

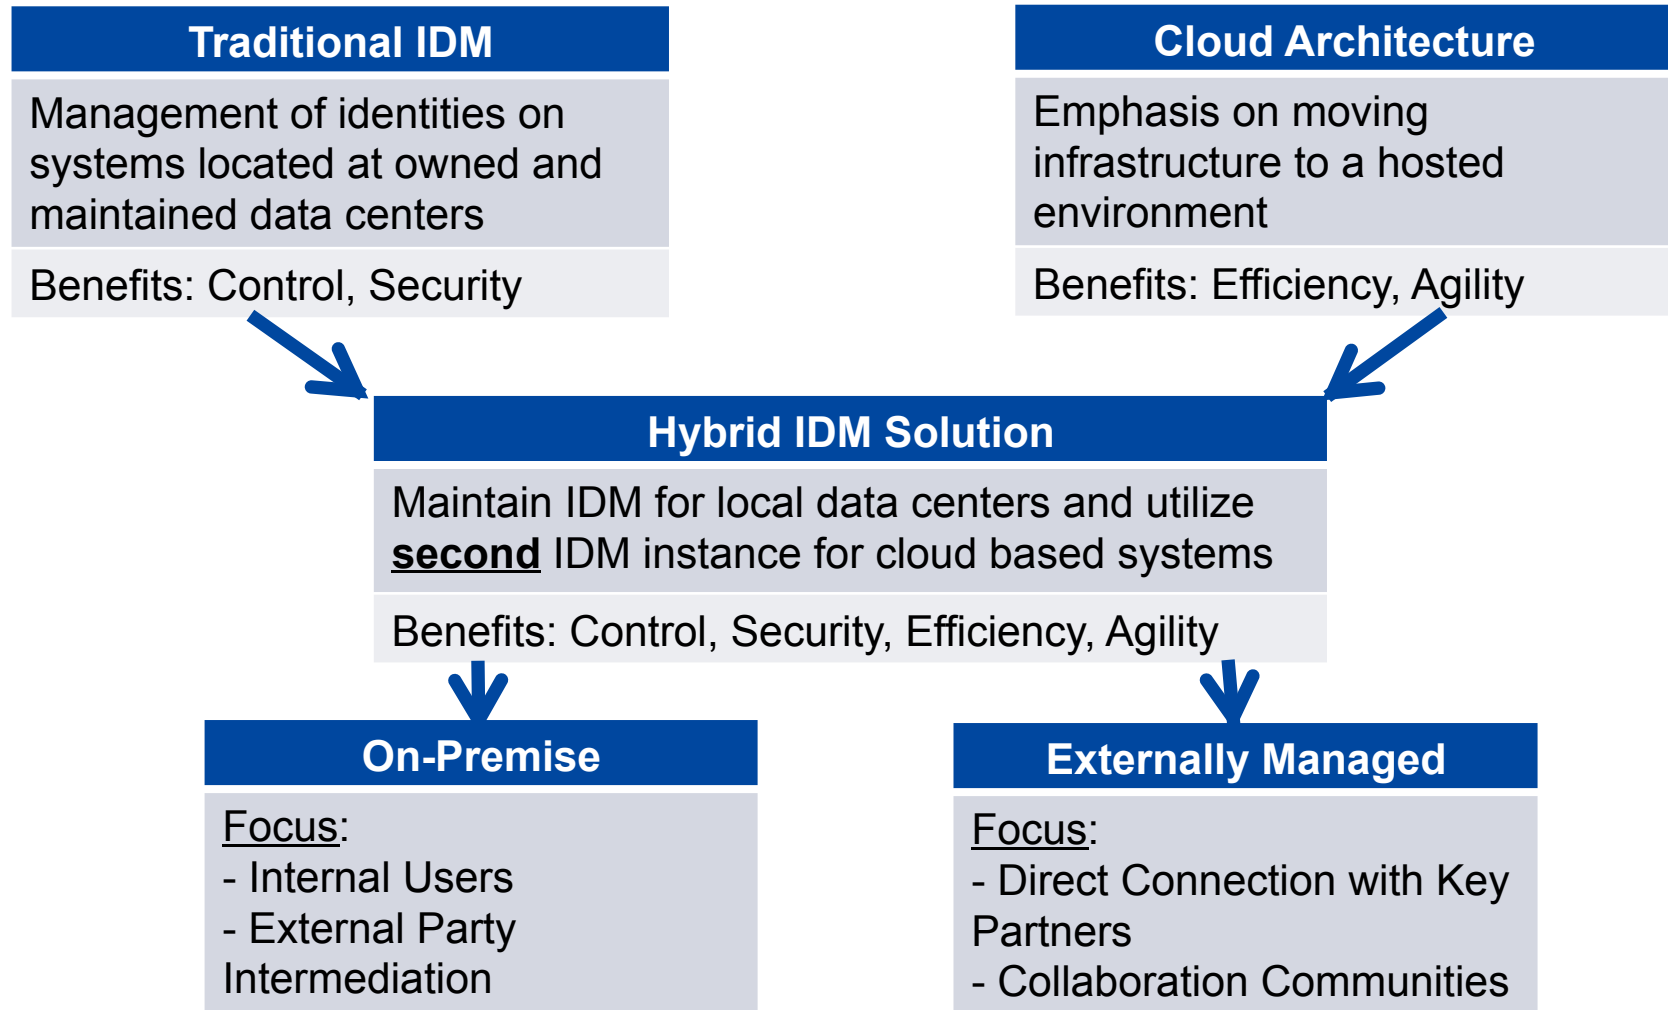

What is Identity in the Cloud?

What is it?

What is Hybrid IDM?

Hybrid Identity Management for the Cloud

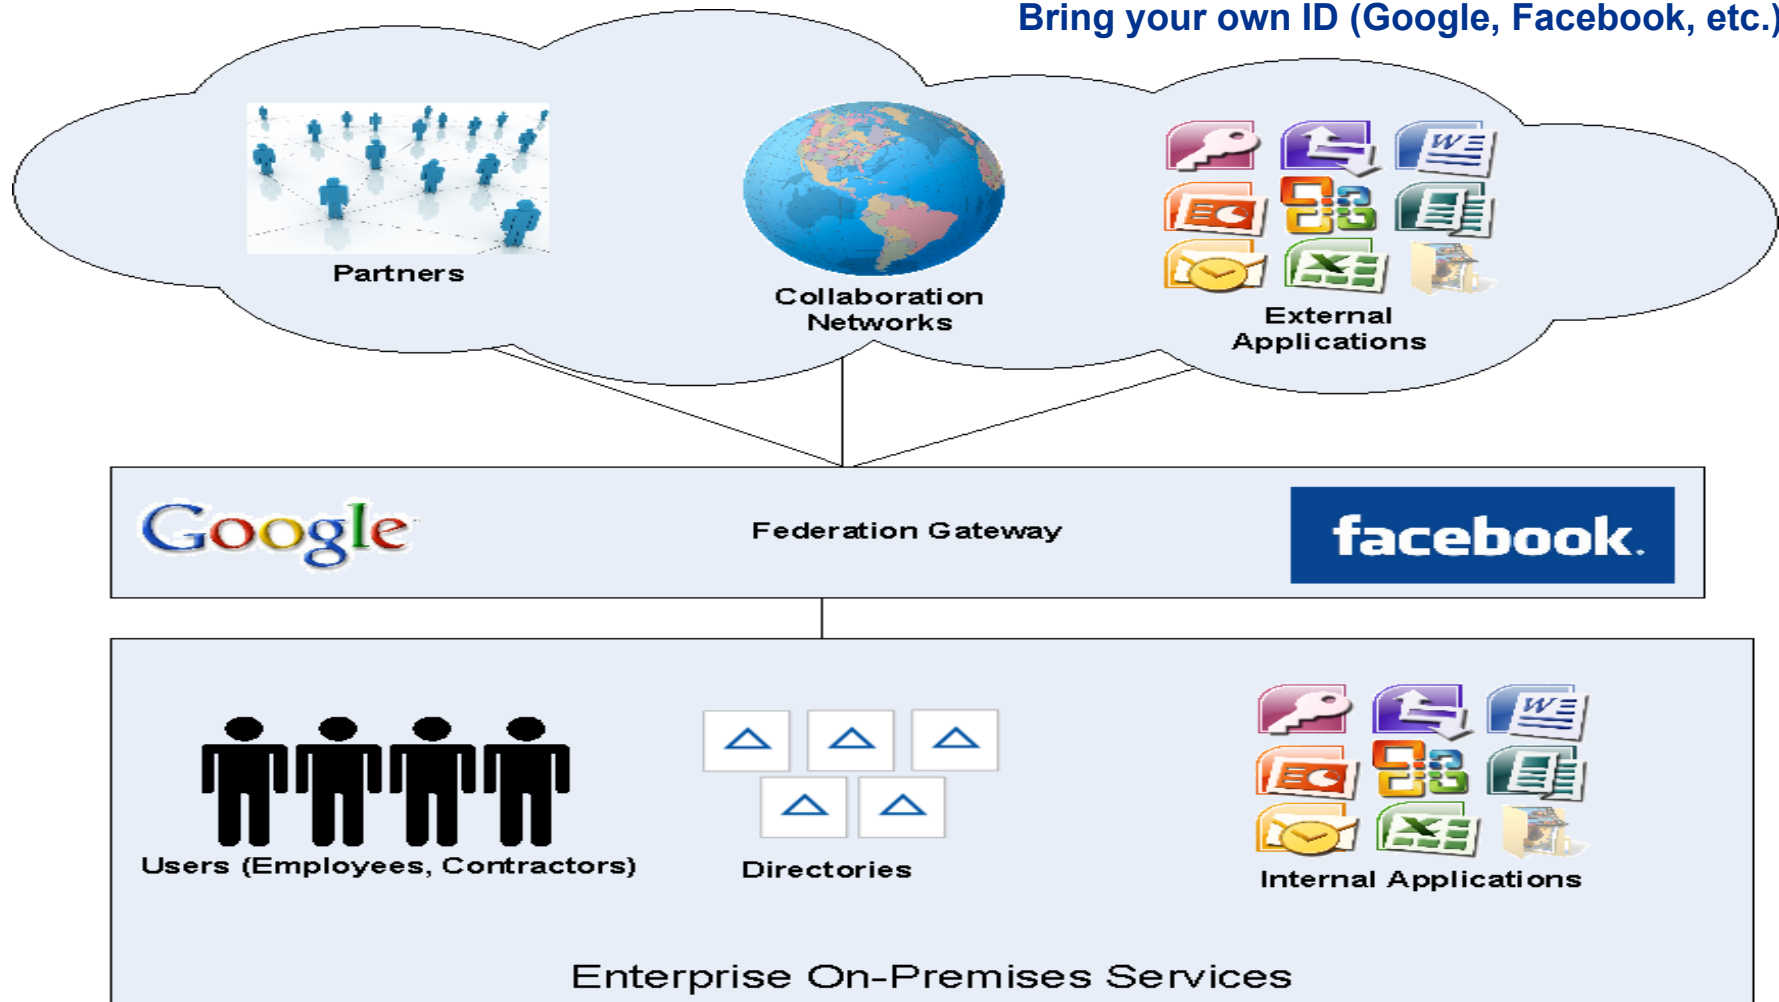

Why?

For What?

Why Now? – Federation

Federation barrier to entry has been reduced
- i.e. Ping Connect

Bring your own ID (Google, Facebook, etc.)

Enterprise Perspective: Macro Trends, Shifting Focuses

Historically the focus of Identity and Access Management has been on managing users (provisioning) and enforcing access policies (access management).

The focus of Identity and Access Management needs to evolve from managing identities to managing communities of users along with roles and entitlements.

Hybrid IDM in the Cloud – Use Cases

Big Box Retailer

- Vendors / Business Partners bring their own ID
- Will this model be the EDI for Identity?

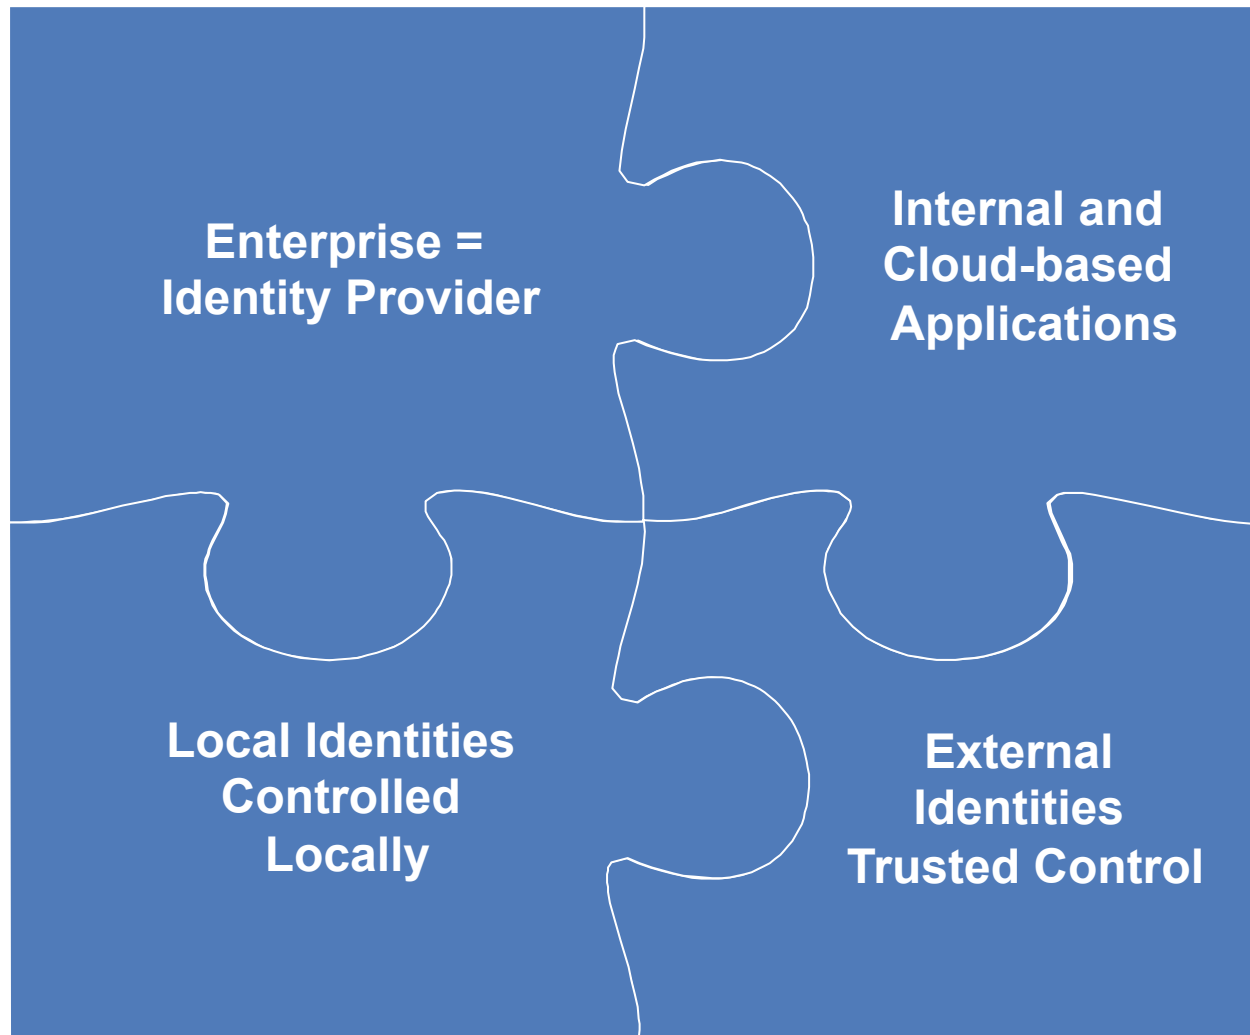

Manufacturer

- 10,000 blue collar employees who login twice a year

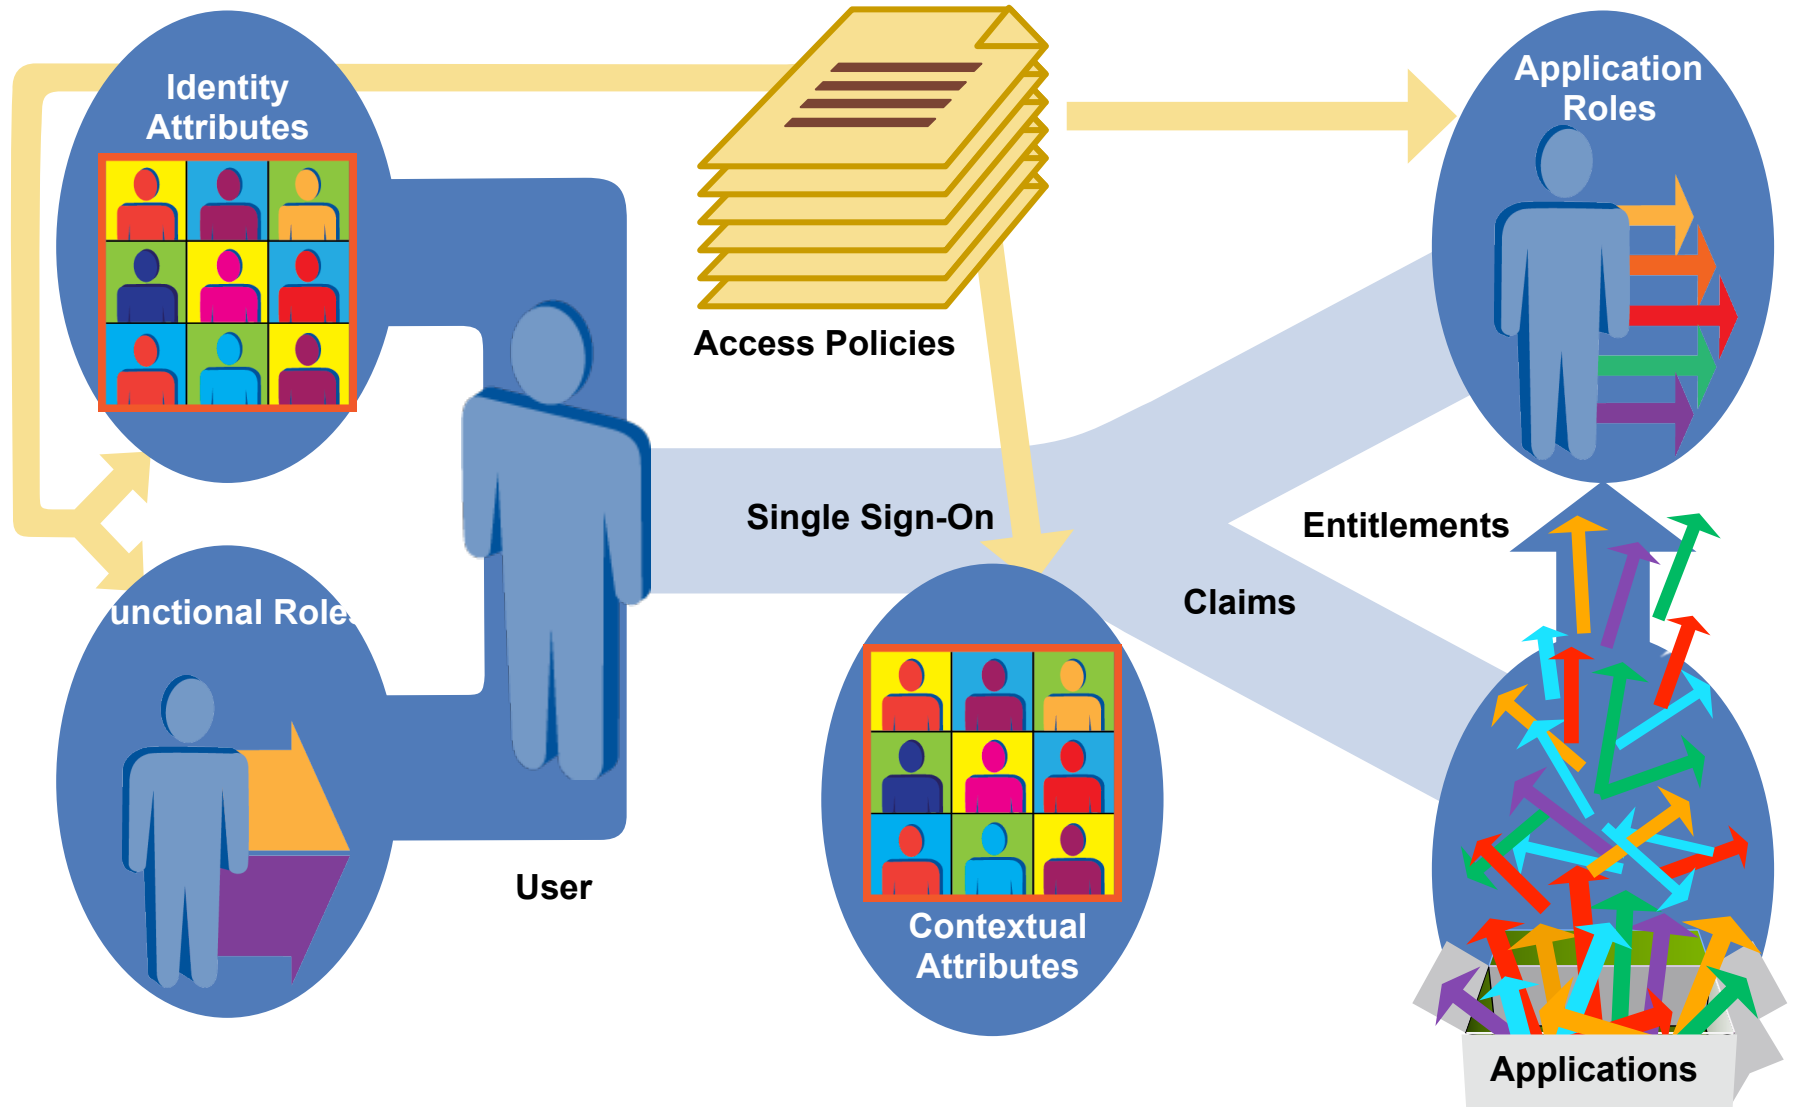

Fast Food Giant

- Almost 100,000 non-employees who need training

Hybrid IDM in the Cloud – How It Works

Hybrid Approach to Identity for the Cloud

Hybrid IDM is a Reality Check, not a Utopian Vision

Enterprise =
Gateway Identity Provider
