

**Insider Threats: Malice, Mistakes and Mountain Lions**

**Brian Vecci**  
 Technical Evangelist, Varonis Systems, Inc.

Cybersecurity Essentials – E31

**Session Abstract**

Target lost 40,000,000 records in 2014 in a breach that cost them \$148 million dollars. Ouch. They had lots of fancy tools watching the perimeter, but fell short when it came to securing insider access. Protecting against insider threats, whether malicious or accidental, is extremely difficult, especially when 71% of employees say that they have access to information they aren't supposed to see. Join us for a live presentation where you'll learn 6 tactics for preventing insider threats.

**Target Audience**

Professionals working in the fields of IT Management, Security Operations, Risk Management and Audit are all faced with an increasing challenge around managing insider threats.

**Speaker Bio**

Brian Vecci is a 19-year veteran of information technology and data security, including holding a CISSP certification, and has served in applications development, system architecture, project management, and business analyst roles in financial services, legal technology, and data security software organizations. Brian currently serves as a Technical Evangelist for Varonis Systems and works passionately to help organizations of all sizes get the most value from their data with the least amount of risk.
